The invention relates to 971 novel human cDNA sequences (ADC29919-ADC31889) and the polypeptides they encode (ADC30890-ADC31860). The invention also relates to nucleic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression vectors and host cells comprising a nucleic acid of the invention; the

611 438 551 378 491 cc against a polypeptide of the invention; an antibody cc against a polypeptide of the invention; an detecting polypucleotides or polypeptides of the invention; and methods of identifying a compound which binds to a polypeptide of the invention. The cc invention further discloses methods of peventing, treating or and/or monoclonal antibodies for carrying out the methods of the invention of control of the invention of control of the polypucleotide probes corresponding to the cDNA sequences of the invention of control sequences corresponding to the cDNA sequences of the invention of control sequences corresponding to the cDNA sequences of the invention of control sequences corresponding to the cDNA sequences of the invention of classification of mutations responsible for genetic disorders or other creating diseases and polypeptides of the invention are control in disponstics, drug screening, forensis, gene mapping, in the case and products dependent on DNA and amino acid sequences. They are considered to the recombinant production of a process. Alzheimer's clistates and other neurodegenerative diseases, anatomica platelet care also useful in generating antibodies, as molecular weight markers, care also useful in generating antibodies, as molecular weight markers, care also useful in generating antibodies, as molecular weight markers, contained human cDNA sequence of the invention of a procents a specifically collaimed human cDNA sequence of the printed specification, but was cobatained in electronic format directly from WIPO at

Novel human polypeptides and polynucleotides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperproliferative disorders and disorders related to organ transplantation.

Claim 1; Page 2022; 2508pp; English.

Sequences ABP31028-ABP35561 represent 4534 novel human proteins classinated ORF (open reading frame) 1.4534, and sequences ABN75054-62 ABN79587 represent cDNAs encoding them. The invention also encompasses CC polypoptides at least 80% identical to the ORF1-ORF4334 (collectively CF referred to as ORFX) proteins, polymucleotides at least 85% identical to the ORF1-ORF4334 (collectively CF PREX nucleic acid sequences, vectors and host cells comprising ORFX CC polymucleotides, the recombinant production of ORFX proteins, antibodies and CC polypoptides, methods of screening for modulators of ORFX proteins, antibodies and CC polypoptides, methods of screening individuals for a predisposition to an CC ORFX-associated disorder. The ORFX proteins of the invention have a wide CC range of biological activities, such as cytokine, cell proliferation, cell differentiation, immune modulation, hemantopolesis regulation, tissue growth, angiogenesis, activin or inhibin activity, chemotactic/ CC chemokinetic activity, hemostatic activity, thrombolyvic activity, cell and antiinflammatory activity, thrombolyvic chemotactic/ CC ordination and antibodies may be used in the treatment of cancers, contained and antibodies may be used in the treatment of cancers, cardiovascular diseases, immune system disorders, disorders related to cytoan transplantation, disorders of tissue growth and regeneratial, control to acids and activity, and the province of primers and probes, in the decertion of ORFX genomic sequences, in the decertion of ORFX genomic sequences or transcripts, in the identification and cloning of homologous countries of the probes, in the decertion and cholesterol ester sequences, in the decertion of ORFX genomic sequences contained by viral, bacterial, contained and activity and bacterial, and in formal and cholesterol ester sequences of primers and probes, in the decertion of ORFX genomic sequences contained by viral, bacterial, contained and activity of ORFX and the produce transgenic animals contained by contained and conta

New polynuclectide and polypeptide useful for diagnosing, preventing or treating conditions such as neurodegenerative diseases, anemias, platelet disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or

SEQ ID NO 2276; 1185pp; English

CC ADC30889) and the polypeptides they encode (ADC30890-ADC31860). The cinvention also relates to nucleic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression excepts and host cells comprising a nucleic acid of the invention; the crecombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention; an extended of identifying a compound which binds to a polypeptide of the invention. The cinvention further discloses methods of peventing, treating or and/or monoclonal antibodies for carrying out the methods of the invention; and methods of compound which binds to a polypeptide of the invention. The conting a medical condition, kits comprising polynuclectide probes and/or monoclonal antibodies for carrying out the methods of the invention; methods for the identification of compounds that modulate the country sequences corresponding to the cDNA sequences of the invention are conting sequences corresponding to the cDNA sequences of the invention are conting sequences of the polypeptides encoded by the contings (ADC32628 cuseful in diagnostics, drug screening, forensics, gene mapping, in the cuseful in diagnostics, drug screening, forensics, gene mapping, in the cuseful in diagnostics, drug screening, forensics, gene mapping, in the cuseful in diagnostics, drug screening, forensics, gene mapping, in the cuseful in diagnostics, drug screening, forensics, gene mapping, in the cuseful in diagnostics, and animo acid sequences. They are cuseful diseases such as Parkinson's disease, Alzheimer's cuseful and products dependent on DNA and amimo acid sequences. They are cuseful and animo acid sequences. They are cuseful animolated processis, anaemia, platelet cuseful animolated processis and cuseful animolated processor cuseful animolated processor cuseful animolated processor cuseful ani

                                                            밁
                                                                                          δ
                                                                                                                                        망
                                                                                                                                                                            Š
                                                                                                                                                                                                                                                                                                   The invention relates to novel genes (AAL37669-AAL37666) and proteins (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein cor gene therapy. The genes are isolated from a range of human tissues (disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the cartenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, (lung, or urogenital; (b) immune disorders e.g. Addison's disease, altergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, (c) arthritis and ulcerative colitis; (c) cardiovascular disorders such as urocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infections. Note: The sequence data for this patent did not form part of the printed specification, but was considered in electronic format directly from WIPO at

CDNA encoding novel human musculoskeletal system antigen #177.

Gene; ss; musculoskeletal system antigen; cancer; metastasis;
re-vascularisation; thrombosis; arteriosclerosis; mineral content;
cardiovascular condition; wound; injury; burn; angiogenesis; ulcer;
post-operative tissue repair; limb regeneration; neuronal growth;
neurodegenerative disorder; Alzheimer's disease; Parkinson's disease;
AIDS-related complex; chondrocyte growth; bone regeneration;
periodontal regeneration; tissue transport; bone graff; skin aging;
keratinocyte growth; hair loss; melanocyte growth; cell proliferation;
cell growth; organ transplant; cell differentiation; body height;
hair colour; eye colour; skin; percentage of adipose tissue;
pigmentation; cosmetic surgery; metabolism; biornhythm; caricadic rhythm;
depression; tendency for violence; pain; reproductive capability;
hormone level; endocrine level; appetite; libido; memory; stress;
tcarbohydrate content; vitamin content; cofactor content;
nutritional component.

```
CC Sequence encoding musculoskeletal system associated polypeptides useful CC sequence encoding musculoskeletal system associated polypeptides useful CC for detecting disorders, e.g., cancer or cancer metastases, in animals or humans. The nucleic acid: stimulates re-vascularisation of ischaemic CC tissues associated with conditions; treats wounds due to injuries, CC and other cardiovascular conditions; treats wounds due to injuries, CC burns, post-operative tissue repair, and ulcers; stimulates angiogenesis and limb regeneration; stimulates neuronal growth; can treat and prevent CC enditions, such as, Alzheimer's disease, Parkinson's disease, and AIDS-CC related complex; stimulates chondrocyte growth, thus they can be used to enhance bone and periodontal regeneration and aid in tissue transports or bone grafts; prevents skin aging due to surburn by stimulates or scrivate hair-forming cells and promotes melanocyte growth; stimulates CC growth and differentiation of hematopoietic cells and bone marrow cells considered the supporting cell culture of primary tissues; cc induces tissue of mesodermal origin to differentiate in early embryos; concerted surgery); modulates mammalian metabolism; changes mammal's metal cc state or physical state by influencing biorhythms, caricadic rhythms, capabilities, hormonal or endocrine levels, appetite, libido, memory, or capabilities, hormonal or endocrine levels, appetite, libido, memory, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    30-AUG-2000; 2000US-0228924P.

```
CC vectors and host cells comprising a nucleic acid of the invention; the creambinant production of a polypeptide of the invention; an antibody cc against a polypeptide of the invention; a method of detecting compounds which binds to a polypeptide of the invention; and methods of cleantifying a compound which binds to a polypeptide of the invention. The clinton further discloses methods of peventing, treating or and/or monoclonal antibodies for carrying out the methods of the cand/or monoclonal antibodies for carrying out the methods of the contribution; methods for the identification of compounds that modulate the contribution; methods for the polypublides and/or monoclonal antibodies for carrying out the methods of the invention compression or activity of the polypublides and or polypeptide; and 767 contribution are presented to the contribution are contributed. The nucleic acids and polypeptides of the invention are constituted in diagnostics, drug screening, forensics, gene mapping, in the contribution are constituted in the polypeptides of the invention are constituted by and producing many other types of data and products dependent on DNA and amino acid sequences. They are also used for treating diseases such as Parkinson's disease, Alzheimer's cdisease and other neurodegenerative diseases, anaemia, platelet canded supplements, ulcers, osteoporosis, autoimune diseases or cancer. The nucleic acids may also be used as hybridisation probes or comparers, and in the recombinant production of a protein. The polypeptides care also useful in generating antibodies, as molecular weight markers, cand in the recombinant production of a protein. The polypeptides cand as food supplements. The present sequence represents a specifically claimed human cDNA sequence of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was considered in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1061 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to 971 novel human cDNA sequences (ADC29919-ADC30889) and the polypeptides they encode (ADC30890-ADC31860). The invention also relates to nucleic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Tang

New human receptor and membrane-associated proteins and polynucleotides, useful for diagnosing, treating or preventing cardiovascular disorders (e.g. aneurysms), neurological disorders (e.g. Parkinson's disease) or

ۍ ۲. Page 232-233; 262pp; English.

The present invention relates to a new receptor and membrane-associated protein (REMAP). The polypeptide, polynucleotide and agonist are useful for treating a condition associated with decreased expression of functional REMAP. The antagonist is useful for treating a disease associated with overexpression of functional REMAP. The anti-REMAP antibody is useful for diagnosing a condition or disease associated with the expression of REMAP. These polypeptides, polynucleotides, agonists and antagonists are particularly useful for diagnosing, treating or preventing cardiovascular (e.g. atherosclerosis, hypertension, aneurysms, congestive heart failure, angina pectoris, or ischaemic or rheumatic heart disease) lung (e.g. oedema, chronic obstructive pulmonary disease, emphysema or bronchitis) gastrointestinal (e.g. nausea, peptic ulcer or Crohn's disease), lipid metabolism (e.g. Fabry's disease, diabetes

```
commember of the fucosyltransferase family comprising: (a) nucleotide comprising 80% identity to sequence $1 (ABA05333) or $3 (ABA05334); (c) comprising fragment of $1 or $3; (c) encoding a polypeptide (II) comprising a fully defined sequence $2 (AAM47905) of 492 amino acids or its fragment; or (d) encoding naturally occurring allelic variant of $2. (I) has cytostatic, antitumour, antiatherosclerotic, hypotensive, antiatherosclerotic, hypotensive, comprising a fully defined sequence $2 (AAM47905) of 492 amino acids or its fragment; or (d) encoding naturally occurring allelic variant of $2. (I) has cytostatic, antitumour, antiatherosclerotic, hypotensive, antiatherosclerotic, hypotensive, compressive, antiatherosclerotic, hypotensive, antiatherosclerotic, hypotensive, antiatherosclerotic, hypotensive, antiatherosclerotic, hypotensive, compressive, antiatherosclerotic, nephrotrophic, compressive, antiatherosclerotic, hypotensive, antiatherosclerotic, hypotensive, antiatherosclerotic, hypotensive, antiatherosclerotic, compressive, antiatherosclerotic, nephrotrophic, compressive, antiatherosclerotic, n
Novel isolated 32132 nucleic acid encoding 32132 polypeptide, a novel member of fucosyltransferase family, useful for treating atherosclerosis, multiple sclerosis, acute glomerulonephritis, Raynaud's disease, pain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 1; Page 105-106; 125pp; English.

CC its fragment; or (d) encoding naturally occurring allelic variant of the cytostatic, antitumour, antiatherosclerotic, hypotensive, (c) inmunosuppressive, antitumour, antiatherosclerotic, hypotensive, antiarrhythmic, vasotropic, antidiabetic, antiarrhythic, communosuppressive, antithyroid, antidiathmatic, nephrotrophic, comphthalmological, antidiarrheic, vulnerary, haemostatic, virucide, comphthalmological, antidiarrheic, vulnerary, haemostatic, virucide, comphthalmological, antidiarrheic, vulnerary, haemostatic, virucide, communosuppressive, analgesic, anorectic, metabolic and immunomodulator cartivity. (I) and (II) are useful for treating proliferative and/or differentiative disorders of the colon, including proliferative and/or differentiative disorders, including prodular hyperplasia and adenomas, complete the colon, including proliferative and/or circluding bronchogenic carcinoma and neuroendocrine tumour. The concluding bronchogenic carcinoma and neuroendocrine tumour. The concluding bronchogenic carcinoma and neuroendocrine tumour. The considers such as acute promyeloid leukaemia, acute myelogenous carcinoma and neuroendocrine tumour. The considers such as acute promyeloid leukaemia, acute myelogenous carcinoma and neuroendocrine tumour. The considers of blood vessels, immunological disorders such as catte promyeloid respective colitis, Crohn's disease, colon disorders e.g., polycystic kidney disease, acute associated with accumulation of fibrous tissue, hepatocallular necrosis or injury induced by agents including processes which disturb haemorrhage, bacterial or viral meningitis, neurodegenerative disorder, glidma, complete sclerosis, metabolic or pain disorders. (I) can be used in gene consisted as caterosis, metabolic or pain disorders. (I) can be used in gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated 32132 nucleic acid (I), encoding a member of the fucosyltransferase family comprising: (a) nucleotide sequence having 80% identity to sequence (I) (ABA05333) or S3 (ABA05334); (b) comprising fragment of S1 or S3; (c) encoding a polypeptide (II) comprising a fully defined sequence S2 (AAM47905) of 492 amino acids or its fragment; or (d) encoding naturally occurring allelic variant of S2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel isolated 32132 nucleic acid encoding 32132 polypeptide, a member of fucosyltransferase family, useful for treating atheros, multiple sclerosis, acute glomerulonephritis, Raynaud's disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 1; Page 105-107; 125pp; English.

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511) expressed DNA sequences (ABL16175) and the encoded proteins (ABB57377-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences 25

The present invention relates to novel human secreted proteins (ABR54278-ABR54331) and their coding sequences (ACC62475-ACC62528). The proteins and their coding sequences are useful for treating, preventing, diagnosing and/or prognosing neoplastic diseases, blood disorders, cardiovascular disorders (e.g. cardiomyopathy, hypertension, hypotension), respiratory disorders (e.g. lung cancer, pneumonia,
                                                                                                                                                                                                                                                              Ruben
Ni J,
                                                                                                                                               Novel human secreted polypeptides and polynucleotides for diagnosing and treating neural, immune system, muscular, reproductive, gastrointestinal cardiovascular, renal, proliferative disorders and cancerous diseases.
                                                                                                                                                                                                                  P-PSDB;

CC bronchiolitis, asthma), endocrine disorders (e.g. Addison's disease, CC Cushing's syndrome, hyperpituitarism, pituitary dwarfism, acromegaly, CC thyroiditis), reproductive system disorders (e.g. premenstrual syndrome, CC polycystic ovary syndrome), infectious diseases caused by bacteria, CC fungal, viral, parasitic, protozoal, and/or blood-related disorders and CC finegal, parasitic, protozoal, and/or blood-related disorders and CC diseases, rheumatoid arthritis, immune deficiency, psoriasis, CC diseases, protocomenstrual syndromene CC diseases, gout, osteoporosis, allergiae, and bone cancers, Paget's CC disease, gout, osteoporosis, arrhythmia, anglina, prostate cancer, renal CC disorders, urolithiasis, Alzheimer's disease, Parkinson's disease, concernia, and concernia, attention deficit disorder, obsessive compulsive concernia, obesity, goiter, ulcerative colitis, hepatitis. They are also CC useful for stimulating epithelial cell proliferation and basal CC keratinocytes for wound healing, and to stimulate hair follicle production and healing of dermal wounds

        The present invention relates to novel human secreted proteins (ABR54278-CC ABR5431) and their coding sequences (ACC62475-ACC6528). The proteins CC and their coding sequences are useful for treating, preventing, CC diagnosing and/or prognosing neoplastic diseases, blood disorders, CC cardiovascular disorders (e.g. cardiomyopathy, hypertension), respiratory disorders (e.g. lung cancer, pneumonia, CC hypotension), respiratory disorders (e.g. lung cancer, pneumonia, CC cushing's syndrome, hyperpituitarism, pituitary dwarfism, acromegaly, CC cushing's syndrome, hyperpituitarism, pituitary dwarfism, acromegaly, CC cushing's syndrome, hyperpituitarism, pituitary dwarfism, acromegaly, CC cytrioiditis), reproductive system disorders (e.g. premenstrual syndrome, CC polycystic ovary syndrome), infectious diseases caused by bacteria, CC fungal, viral, parasitic, protozoal, and/or blood-related disorders and confections, leukopaenia, leukaemias, arthritis, asthma, autoimmune CC diseases, rheumatoid arthritis, immune deficiency, psoriasis, cc diseases, rheumatoid arthritis, arthritis, asthma, autointered cancer, renal CC diseases, urolithiasis, Alzheimer's disease, Parkinson's disease, renal CC diseases, urolithiasis, Alzheimer's disease, Parkinson's disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; cardiant; hypotensive; hypertensive; cytostatic; antiinflammato antiasthmatic; osteopathic; antithyroid; gynecological; antibacterial; fungicide; virucide; antiparastic; protozoacide; antianaemic; antiarthritic; immunosuppressive; antirheumatic; antipsoriatic; haemostatic; antidiabetic; antiallergic; antigout; antiarrhythmic; haemostatic; antidiabetic; antiallergic; antigout; antiarrhythmic;
                                                                                                                                                                                                                                                                                                                                                                                                   Novel human secreted polypeptides and polynucleotides for diagnosing and treating neural, immune system, muscular, reproductive, gastrointestinal, cardiovascular, renal, proliferative disorders and cancerous diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                endocrine disorder; reproductive system disorder; infection; arthritis; asthma; autoimmune disease; immune deficiency; psoriasis; diabetes mellitus; allergy; Paget's disease; gout; osteoporosis; renal disorder; Alzheimer's disease; Parkinson's disease; schizophrenia; attention deficit disorder; obsessive compulsive disorder; wound healing;

(first entry)

```
The present invention relates to novel human secreted proteins (ABR54278-ABR54331) and their coding sequences (ACC62475-ACC62528). The proteins and their coding sequences are useful for treating, preventing, and their coding sequences are useful for treating, preventing, cardiovascular disorders (e.g. cardiowypathy, hypertension), respiratory disorders (e.g. lung cancer, pneumonia, hypotension), respiratory disorders (e.g. lung cancer, pneumonia, bronchiolitis, asthma), endocrine disorders (e.g. Addison's disease, Cushing's syndrome, hyperpituitarism, pituitary dwarfism, acromegaly, thyroiditis), reproductive system disorders (e.g. premenstrual syndrome, polycyscic overy syndrome), infectious diseases caused by bacteria, fungal, viral, parasitic, protozoal, and/or blood-related disorders and infections, leukopaenia, leukaemias, arthrittis, asthma, autoimmune diseases, rheumatoid arthritts, immune deficiency, psoriasis, paget's haemophilia, diabetes mellitus, allergies, and bone cancers, Paget's disease.
                                   disease, gout, osteoporosis, arrhythmia, angina, prostate cancer, renal disorders, urolithiasis, Alzheimer's disease, Parkinson's disease, schizophrenia, attention deficit disorder, obsessive compulsive pneumonia, obesity, goiter, ulcerative colitis, hepatitis. They are also useful for stimulating epithelial cell proliferation and basal keratinocytes for wound healing, and to stimulate hair follicle production and healing of dermal wounds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel human secreted polypeptides and polynucleotides for diagnosing and treating neural, immune system, muscular, reproductive, gastrointestinal, cardiovascular, renal, proliferative disorders and cancerous diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                haemostatic; antidiabetic; antiallergic; antigout; antiarrhythmic; antianginal; nephrotropic; neuroleptic; neuroprotective; nootropic; antianginal; tranquiller; anorectic; antiulcer; hepatotropic; antiparkinsonian; tranquiller; anorectic; antiulcer; hepatotropic; dermatological; gene therapy; neoplastic disease; blood disorder; cardiovascular disorder; respiratory disorder; cancer; endocrine disorder; reproductive system disorder; infection; arthritis;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 43, Application US/09876997

Publication No. US20030152921A1

SEQUENCE INFORMATION:

APPLICANT: Dumas Wiline Edwards, Jean Baptiste

APPLICANT: Bougueleret, Lydie

APPLICANT: Jobert, Severin

TITLE OF INVENTION: FULL-LENGTH HUMAN CDNAS ENCODING POTENTIALLY SECRETED PROTEINS

FILE REFERENCE: 78 US4. CIP

CURRENT APPLICATION NUMBER: US/09/876,997

CURRENT FILING DATE: 2000-12-0-6-08

PRIOR APPLICATION NUMBER: US 60/187,470

PRIOR APPLICATION NUMBER: US 60/187,470

PRIOR FILING DATE: 2000-12-0-6

PRIOR FILING DATE: 2000-03-0-6
